Disclaimer Statement

WE ARE NOT A MEDICAL FACILITY

We make no diagnosis concerning your health or the health of your child. We are not performing your ultrasound looking for any abnormalities and/or any other health related factors that could be preexisting at the time of your visit with us. We are an elective 3D/4D Ultrasound facility for purposes of obtaining photos and video solely as a bonding experience between you and your baby. We make no diagnosis during your ultrasound concerning you or the health of your child. Your doctor will order a medical diagnostic ultrasound usually around 20 weeks, to do measurements and check on baby's health and wellbeing. This will be performed at a medical facility by a medical ultrasound technician, read by a licensed radiologist. **"We do not provide medical diagnostic ultrasound at our facility nor will we be looking for anomalies."**

*It is highly unlikely but possible at the time of your visit with us; our technician may suggest you be evaluated by a medical professional. In this instance it should not be cause for alarm as only a Medical Professional can diagnose you. This would be simply a precautionary measure by our technicians at their complete discretion. We emphasize we are not and will not be looking for any anomalies or issues with you or baby as we are for purposes of bonding only.

*It is unlikely but also possible a facial abnormality undetected at your diagnostic ultrasound may show later in 3rd Trimester when performing an elective 3D/4D bonding ultrasound. If you have any questions concerning what you see on screen or the health of your child you should asked to be seen by your physician.

IMAGES:

We try to obtain the best photos/video possible during your 3D/4D session however many times baby can be uncooperative and/or other factors may contribute in not obtaining clear crisp images. Keep in mind every 3D/4D scan can have varying results as every expecting mother and baby are different. We note on our website & try to encourage hydration

3D images while others can be a challenge to get 1 face shot, some of these factors are listed. Peek A View 3D/4D Ultrasound

*With every ultrasound we provide, we do our best to capture optimal images. 3D/4D imaging quality can and will vary by but not limited to, low and/or cloudy amniotic fluid, late gestational age, unfavorable fetal lie (position) or maternal body habitus (weight, build, size, structure) placenta location, babies leg, arm, hand, feet in front of face which can create a black void. We always try our best to obtain as many images as possible during your session and go the extra mile if we are having trouble with any above factors however please be aware each woman and baby are different and as such each outcome of footage can be different. We can make no guarantee that your images will be perfectly clear as it will all depend on you, your body and your baby.
